# The Campus Co-Pilot Suite

Empowering Students with Autonomous Agents for Academic, Career, and Social Excellence

## Autonomous Study Buddy

Multiagent System that help you prepare for **exams**, choose the right **course**, research only **study material**, creates a **training plan** for the exam phase.

Example: The system takes a lecture topic and spawns three agents: a Skeptic (to find flaws/counter-arguments), a Simplifier (to explain it like a 5-year-old), and a Researcher (to find real-world case studies). They "talk" to each other to refine a study guide for the student.

## Study Career Agent

Agent that audits **professional hygiene**, maps skill gaps to industry standards and proactively scouts **real-world growth opportunities**.

Example: Scans CVs for "red flags" (e.g., [gamer\\_king99@gmail.com](mailto:gamer_king99@gmail.com)), Cross-references transcripts against modern tech stacks, Shows Upskill potentials (tools, knowledge, people, ...), Opportunity Scout (Working Student Jobs, Reply Workshops), Thesis Scout (Find or craft thesis ideas that really match your interests and skills)

## University Navigator

Autonomous agent that master's campus **bureaucracy** and **logistics** to eliminate administrative friction and optimize the student experience.

Example: Parses complex Exam Regulations to map graduation paths, Finds and books library study spaces via real-time APIs, Identifies relevant professors/peers for networking, Syncs with campus event portals to handle registrations, and Proactively manages deadlines for exam enrollments or housing.

## Extracurricular Scout

Autonomous agent that proactively **identifies**, **schedules**, and handles **registrations** for activities beyond the lecture hall to maximize personal and professional growth.

Example: Scans campus portals and Reply workshop pages for high-impact events, Navigates ZHS to secure limited sport spots the moment they open, Maps student club/Fachschaft meeting cycles, Identifies seasonal highlights like TUnix, and Autonomously integrates all deadlines and event times into your personal calendar gaps.

... and may more!

# THE CHALLENGE: CREATE AN AGENT THAT ACTS.

Forget simple chatbots. This challenge is about building an **autonomous AI agent** that transforms an aspect of student life at TUM through self-directed action.

# EVALUATION CRITERIA

## INNOVATION / AMBITION

25%

- ♥ Uniqueness & Creativity
- ♥ Ambition & USP
- ♥ Concept execution
- ♥ AI Integration

## USER INTERFACE / USER EXPERIENCE

25%

- ♥ Aesthetics & Polish
- ♥ Usability
- ♥ Workflow & Navigation

## OVERALL QUALITY

25%

- ♥ Functionality
- ♥ AI Effectiveness
- ♥ Critical Features
- ♥ Scoping

## PRESENTATION QUALITY

25%

- ♥ Preparation
- ♥ Communication
- ♥ Overall Delivery

# TECHNICAL SETUP

## BEST PRACTICES

Choose your **TOOLS** for the **TEAM**

Work **LOCALLY** or in the **CLOUD**

We offer you access to **AWS**  
(but it's **not mandatory** to use it!)

Technical support and help can be  
provided for **AMAZON WEB SERVICES**

→ **CONTACT US**

# GET PROGRAMMATIC ACCESS TO AWS

# WHAT YOU CAN DO WITH PROGRAMMATIC ACCESS TO AWS

# TECHNICAL SETUP

## Amazon Bedrock

- Centralized API access to **MANY** LLMs
- Free access through the provided credentials
- Create an **MCP** server with Bedrock Agent Core

## Amazon S3

Simple Storage Service

- General object storage
- Store files in a folder structure
- S3 Vectors allows you to setup a **RAG** easily

## AWS SageMaker

- Sagemaker notebook as an easy collaborative environment
- Easy integration with version control and AWS environment
- S3 Vectors allows you to setup a **RAG** easily

# WORKSHOP

## INTRODUCTION TO AWS

Saturday 11:00-12:00

Room 0602 / 0606
